JUDGE — THE DECISION

Strongly Disagree

confidence 0.90 · model gemini-3-flash-preview

Asarum europaeum contains **aristolochic acid**. Paper [1] establishes that aristolochic-acid plants cause **aristolochic acid nephropathy** — rapidly progressive, irreversible renal fibrosis, and a known carcinogen. The book claims the plant *purifies the kidneys*; the evidence shows it *destroys* them. Paper [2]’s hepatoprotective note (a formula containing Asarum) does not offset that renal risk; paper [3] is only a market record, no efficacy.

This is not a translation error or faulty logic — it is a genuine, safety-critical contradiction the pipeline surfaced correctly.

... حمض الأرسطولوشيك يسبب اعتلال الكلية (تليفاً كلوياً لا يمكن عكسه)، مما يناقض تماماً ادعاء الأنطاكي بأنه «يصفى» الكلى أو يفتح سدها.

Fully machine-logged. Every stage above – the search query, the 17 papers found, the 3 kept, the judge’s prompt and raw reply – is recorded per-row in **factcheck_trace_v1_base1.jsonl** (entry 47). Nothing here is reconstructed after the fact. Source page image: **Tathkerat Dawood Alantaqi.pdf**, p. 53.
